<h1>About Tree </h1>
<p>In botany, a tree is a perennial plant with an elongated stem, or trunk, usually supporting branches and leaves. In some usages, the definition of a tree may be narrower, including only woody plants with secondary growth, plants that are usable as lumber or plants above a specified height. </p>

<h2>About Human</h2>
<p>Humans or modern humans are the most common and widespread species of primate, and the last surviving species of the genus Homo. They are a great ape characterized by their hairlessness, bipedalism, and high intelligence. </p>

<h3>About Fish </h3>
<p>A fish is an aquatic, gill-bearing animal with a hard skull that lacks limbs with digits. This includes hagfish, lampreys, and both cartilaginous and bony fishes. Some 96% of living fish species are teleosts, bony fishes able to protrude their jaws. </p>
